PROFILE

Frontend developer with a proven ability to implement responsive web designs and development principles. Proficient in ReactJS, Typescript, JavaScript, HTML, and CSS, plus modern libraries. Capable of maintaining organized workflows, using GitHub. Passionate for continuous learning of software development. Enjoy working closely with team members.

SKILLS

Proficient	Tried	Dev Tools	Design Tools
ReactJS	Node.js	GitHub	Figma
Typescript	NextJS	VSCode	Adobe XD
JavaScript	MySQL	WebStorm	Zeplin
HTML	Firebase		Photoshop
CSS	PHP		Illustrator

WORK HISTORY

Frontend Developer | StepPay, South Korea   June 2021 - June 2022

Key projects I worked on;

- Developed a service Interface called "My Store" - an online shop, automatically generated once clients sign up to the StepPay portal, where they can sell their products directly to customers, even without using APIs or sending payment links. After developed the responsive online shop UI, built the service by linking the data (seller and their product information) from their StepPay portal account, and implemented key shop functions for the UI, as integrated APIs.

- Produced a Software Development Kit that provides the entire product list, a product detail section, or an account/order managing section - which are the main functions of the "My Store" service above. Clients could simply copy and paste HTML codes from the StepPay portal to their own sites. A javascript file will then be loaded and begin rendering the elements they wanted, in the place where they pasted the codes.

- White labeled Duda's website builder feature, making this SDK even easier to use for clients.

EDUCATION

Green Computer Academy, Frontend Development	August, 2020 - March, 2021
Kyungpook National University	March, 2012 - August, 2015
