

LIM KIM

FRONTEND ENGINEER

Turning complex ideas into clear, useful products

077 8499 0516

| limkimdev@gmail.com

| London, SE23 3YP

Frontend engineer with experience building AI-powered scheduling tools, healthcare analytics platforms, and e-commerce products. I combine hands-on frontend development with product thinking and delivery ownership, helping shape what gets built, turn early ideas into practical engineering plans, and take features through to production. I work closely across product, design, backend, and AI teams, and step beyond the UI when needed to solve problems end to end.

WORK EXPERIENCE

nPlan (London, UK)

Jan 2025 – Present

Frontend Engineer

- Led frontend delivery across several major scheduling and forecasting initiatives, including expanding forecasting from milestone-level outputs to full schedule-level insights and building bulk schedule upload workflows.
- Built the initial frontend architecture for Schedule Studio, nPlan's AI-powered schedule generation product, covering configuration workflows, asynchronous pipeline states, Gantt visualisation, and AI-assisted schedule editing.
- Drove the frontend delivery of a new AI-assisted schedule optimisation product that suggests alternative schedules designed to reduce project risk and cost. Took it from early concept through to delivery by defining the frontend requirements and architecture, building the core user-facing experience, and coordinating dependencies across product, backend, and AI teams.
- Worked beyond the UI layer when needed, tracing production issues across frontend and backend systems and implementing backend fixes to address root causes.
- Contributed to frontend hiring by designing React and TypeScript technical assessments and interviewing candidates through live-pairing and pull-request review stages.

Lane Clark & Peacock (London, UK)

Jan 2023 – Dec 2024

Frontend Developer

- Worked directly with healthcare consultants to design and build Novo Nordisk's PRISM platform, owning the UX, UI, and visualisations used to explore multimorbidity, biomarker risk factors, and overlap across therapy areas.
- Built healthcare analytics products for organisations including the Royal College of Obstetricians and Gynaecologists, the British Heart Foundation, and Health Index, translating complex clinical and population-health questions into clear, usable product experiences.
- Developed data-heavy dashboards and exploration tools using Vue, TypeScript, and Highcharts, transforming large population-health datasets into interactive visualisations for analysis and decision-making.
- Improved the performance of client-side data processing and rendering, and helped modernise the frontend stack through a Vue 2 to Vue 3 migration and expanded Vitest coverage.

StepPay (Seoul, South Korea)

Jun 2021 – Jun 2022

Frontend Engineer

- Built the frontend for a self-service merchant platform covering product and subscription management, storefront setup, and customer checkout.
- Developed a templated e-commerce system that turned merchant-configured products and content into ready-to-use customer-facing storefronts.
- Built an embeddable checkout SDK that enabled third-party websites to integrate product catalogues, subscriptions, and payments with minimal implementation effort.

SKILLS

- **Frontend:** React · TypeScript · JavaScript · Vue · Zustand · Apollo Client · Tailwind CSS
- **Data & visualisation:** GraphQL · REST APIs · Highcharts · Client-side data processing
- **Testing & tooling:** Vitest · Nx · Vite · Git
- **Product & delivery:** Requirements shaping · Technical planning · Cross-functional delivery · End-to-end feature ownership
- **Design:** Figma · Adobe XD

EDUCATION

- | | |
|---|-------------|
| • Green Computer Academy - Frontend Development Programme | 2020 – 2021 |
| • Kyungpook National University | 2012 – 2015 |
