### PROFILE

---

Frontend engineer with experience across AI-powered scheduling, healthcare analytics, and e-commerce. I've worked on products ranging from schedule generation and forecasting tools to population-health analytics platforms and embedded payment solutions.

Over time, my role has naturally expanded beyond frontend implementation into requirements shaping, delivery planning, production investigations, and cross-functional collaboration, helping turn complex ideas into delivered products.

### WORK EXPERIENCE

---

#### nPlan

London, UK

Frontend Engineer | Jan 2025 - Present

- Led frontend delivery across several major initiatives, including Full Schedule Layer, Portfolio Bulk Uploader, Schedule Studio, and Decision Intelligence, taking ownership from requirements through to release and support.
- Built the initial frontend architecture for Schedule Studio, nPlan's AI-powered schedule generation product, covering schedule generation workflows, WBS configuration, pipeline orchestration, Gantt visualisation, and AI-assisted editing.
- Played a key role in shaping and delivering Decision Intelligence from an early concept into a delivered product, contributing to architecture discussions, requirements definition, delivery planning, stakeholder alignment, and frontend implementation.
- Regularly owned features and epics end-to-end, translating ambiguous requirements into deliverable engineering plans and coordinating dependencies across frontend, backend, AI, and product teams.

#### Lane Clark & Peacock (LCP)

London, UK

Frontend Developer | Jan 2023 – Dec 2024

- Led frontend delivery of healthcare analytics platforms for pharmaceutical and healthcare organisations, transforming large population-health datasets into interactive decision-support tools.
- Delivered Novo Nordisk's PRISM platform, enabling exploration of multimorbidity, biomarker risk factors, and therapy-area overlap across large patient populations.
- Built analytical products for organisations including the Royal College of Obstetricians and Gynaecologists (RCOG), the British Heart Foundation, and Health Index, helping stakeholders identify healthcare inequalities and monitor population-health outcomes.
- Worked closely with analysts, clinicians, and non-technical stakeholders to translate complex healthcare requirements into intuitive and actionable products.
- Improved performance of large client-side data-processing workflows through more efficient data transformation and rendering strategies.

## StepPay

South Korea

Frontend Developer | Jun 2021 – Jun 2022

- Built a merchant platform enabling businesses to manage products, subscriptions, and customer-facing online stores through a self-service dashboard.
- Developed a templated e-commerce solution that automatically generated storefronts from merchant-configured products and content.
- Built an embeddable checkout SDK that allowed third-party websites to integrate product catalogues, payments, and subscription workflows with minimal implementation effort.

## SKILLS

---

React · TypeScript · Vue · JavaScript · Zustand · Apollo Client · GraphQL · REST · Highcharts · Tailwind · Vitest · Figma

## EDUCATION

---

Green Computer Academy - Frontend Development

2020 – 2021

Kyungpook National University

2012 – 2015
